Would You Like to Review Software for *JOM's* Readers?

A number of microcomputer programs for IBM PCs or compatibles are currently available for review in *JOM.* They are

- *Structure and Properties,* a database that allows a user to draw the structure or substructure of a molecule on a computer screen to obtain information on chemical properties.
- *Properties of Molten Salts,* a database that provides rapid access to approximately 750 compilations on the properties of 320 inorganic salts in the molten state, including density, surface tension, electrical conductance, and viscosity.
- *PC Laminate,* an educational package designed to make the concepts and application of classical laminated plate theory more user friendly.
- *MICPro,* an on-line advisor for predicting microbiologically influenced corrosion.
- *DIPPR Pure Component Data Compilation,* a database on the thermophysical properties of the most common industrial chemicals.

Programs are given to qualified reviewers on a first-come, first-served basis. Reviewers have 90 days to prepare and submit a 500–700 word review. As long as you provide a responsible review, you may keep the software as a registered user.
